Is Preventative Maintenance in Your Plans for 2011?

It's unanimous! We're all happy that 2010 is over. Many companies took a hard look at preventative maintenance (PM) last year and chose not to perform this routine service,..... and just wait till the equipment "broke down"!

We all know that can be an expensive way to go! Catching those small problems (before they become BIG problems) - is always more cost effective in the long run.

With Preventative Maintenance on your burners, you will receive a combustion/efficiency report after your routine inspection and repairs are completed. The purpose of a PM is to ensure maximum efficiencies and energy savings. Along with piece of mind, by maintaining the history, you'll have the information you need to plan for any potential upgrades for new equipment. What a difference it makes when you can show management your justification for a new purchase.

Check our website and take a few minutes to watch our panel interview – with a few of our clients, on the subject.....The Cost of Doing nothing. We hope you'll gain some in-site to help you make decisions for running your particular building or facility!

Mid-Season Burner Tune-Up for Maximum Energy Savings

Cold weather continues to loom over our area placing stress on our boilers. Because of the constant use under these normal to higher heating loads, now is a great time to check your boilers' efficiency. A burner Tune-Up / Combustion Analysis is just what the doctor ordered!

Call us today, while you can still take advantage of Nicor and Peoples Gas Rebate programs for the burner tune-ups. Rebates up to \$350.00 are still available..... while time lasts! (Call for information). 773-737-9200.

What? I Didn't Know!

In the past couple of months, I've had a few people approach me asking who they can call to service their large commercial/industrial oven or melting furnace? Well, I thought it might be a fantastic idea to remind everyone of the specialty type services ACSI provides.

We provide 24 hour emergency service & repairs for:

Boilers

Burners - Gas and Oil
Burners Firing Alternative Fuels

Crematories
High Temperature Furnaces
Incinerators

Kilns
Ovens
Melting Furnaces
All Types of Refractory Repairs & Installations

Chillers
Refrigeration Systems
Air Conditioning Systems
Instrumentation & Flow Recording Equipment

Piping Installation & Repair
