White Paper: “Gaining Efficiencies with a Boiler OR Burner Replacement”

Let's be honest, approximately 10% of facilities managers are proactive each year preparing for the fall and winter...now. The majority will begin the process when fall arrives. If that's the case, save this for the fall. However, if you want to get ahead, then let's get started.

We all know the boiler and burner combination is a vital component for a company, residential high rise, institutions, and healthcare facilities. In order to gain control over energy consumption and costs of purchase, many wonder if a boiler and burner replacement is necessary. We're here to tell you...maybe not.

ACSI has developed a detailed white paper answering that question as well as discussing, in detail, the following:

- Boiler – how it is evaluated and when or if it should be replaced
- Burner – how has technology changed and what are the benefits
- Energy Savings – purchasing energy is costly, how can a boiler and/or burner help save
- Money – justifying a boiler and/or burner is as easy as ROI

Are you ready to get the ACSI White Paper?

Great. Visit www.ACSIGroup.com/boiler_burner.aspx to download the white paper. While you're there, find out how you can buy a new burner with no capital money. Begin saving right away this fall.

Alternative Fuels

Many stay away from discussing alternative fuels due to the delicate nature of working with them. ACSI Mechanical has the expertise to help you achieve better efficiencies and cost saving results.

Natural Gas
Light Oil
Heavy Oil
Vegetable Oil
Waste Oil
Sawdust
Coal Fired Equipment
Landfill Gas
Digester Gas
Oxygen Enriched Combustion
