IMPORTANT NEWS:

To All of You Who Have Gordon-Piatt Fuel Burners

I'm sure that you are aware by now, back in April of 2009, John Zink Co. (Owners of the Gordon-Piatt Burner Line) announced **that they will no longer manufacture this burner**. Parts will be available ...until they are not! (We already had trouble trying to get parts for a client).

If you find yourself in a situation needing parts, give us a call. We may be able to repair, rebuild or retro-fit a component.....to keep you in operation!

Maybe it's time to be thinking about upgrading to a new High Efficient Burner?

This is surely a step in the right direction to "Go Green"!!!! Call us....we can help you with an ROI Estimate, to help you justify this upgrade!

It's Officially Fall... Have You Scheduled Your Boiler/Burner Clean & Check?

Waiting to get the boiler and burner cleaned and checked can cause you problems in the near future. Even though your boiler may not be working hard or working at all the last few months, doesn't mean system leaks or sediment build up inside the boiler has gone away.

It's still there and needs your attention...now, prior to turning on the units.

These can be costly problems that can easily be avoided by simply having a technical expert from ACSI out to care for the boiler and burners.

While we're there...ask us about potential energy savings (by upgrading to a High Efficient Burner). We'll provide you a questionnaire to fill out with vital information. Send it back to us and we'll calculate the energy cost savings for your situation.

Better yet, go to our website and fill it out directly online.
